INTRODUCTION

The labeling perspective is as controversial as any approach social science has ever seen. Further, the literature published directly or indirectly within the context of the perspective is impressively large. Finally, the perspective is not discipline bound. On the contrary, literature on or about the subject is found in many disciplines and subdisciplines. For these reasons, we have compiled what we believe is an exhaustive listing of publications within the framework of the labeling perspective. It is our hope that the listing will aid teachers, researchers, and students who wish to become familiar with the literature for a variety of scholarly reasons. We assume full responsibility for omissions that might have occurred.
